CHICK STARTER KIT
with starter instructions

10 lb. Chick Feed

6 lb. Feeder

1 Gallon Waterer

Heat Lamp

Our chick starter kit is perfect for anyone starting out! There is so much contradicting info and it's hard to know what to believe. We not only supply you with what you need to start, we also include a downloadable PDF with care info to start and some common care for adult chickens. Order your coop, and this starter kit and you are ready to begin!

Includes:
- 6lb. Feeder
- 1 Gallon Waterer
- Heat Lamp
- Chick Feed 10lbs
- Chick Care Instructions
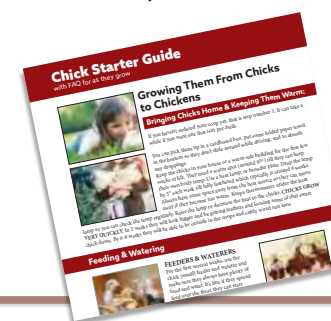

Table Of Contents

Find the ID Code
Beside each size/style you will find the Coop ID code to use for ordering.

Q732C   *= Quaker 7x32 Combination*

Look for the coop...
The numbers throughout this catalog show how many chickens each coop will hold.

35 CHICKENS
← RECOMMENDED # OF CHICKENS

Welcome

Raising chickens is a wonderful hands-on family project that teaches kids valuable life lessons, and allows all of us to be a little closer to nature.

Enjoy...

Enjoy fresh eggs and family fun with a quality-built chicken coop! Choose from a variety of styles and sizes – with a long list of standard features. Or we can customize your chicken coop to meet your specific needs. Either way... it's sure to give your chickens something to cluck about!

With your complete satisfaction a top priority, our family-owned business is proud to offer you a full line of handcrafted chicken coops at affordable prices. All designed for the comfort and safety of your feathered friends...and easier chicken care and egg collecting for you.

Durable Craftsmanship · Safe & Secure   Easy Maintenance · Variety Of Sizes

Tips for keeping a successful
henhouse

Guidelines for housing needs:

- Most coop guides suggest approximately 2 square feet of space per adult bird. We use approx. 3 sq. ft when figuring amounts to make sure your birds have plenty of room.

- At a bare minimum, the coop should be easy to clean, well ventilated but draft-free, include clean watering and feeding stations, and offer adequate roosts.

- Good, natural light is a plus.

- Dirt floors can work where the soil is sandy and the drainage reasonable, but a wooden floor is vastly easier to clean and protect. We recommend our epoxy surface for ease of cleaning.

- Good bedding, such as sawdust (untreated wood only), wood shavings, or chopped straw is ideal.

All Year Round!

When keeping chickens through the winter, remember:

- Chickens need extra grain to keep them warm and also to compensate for lack of grass and insects.

- Keeping the coop filled with the recommended amount of chickens helps keep the temperature comfortable.

- Make sure the birds have water … not ice.

Common Problems
with backyard chickens, and how to fix them.

- **Broody Hens who refuse to leave the nest**

  1. Try to break the habit by removing eggs as soon as they are laid.

  2. Keep her away from the Nesting Boxes for approximately a week.

  3. Nest inserts can be used which cause eggs to roll away as soon as they are laid.

- **Blocked or Sour Crop**

  1. Keep poultry grit readily available at all times to help healthy digestion.

  2. Try feeding her some oil and massaging several times a day to loosen blockage.

  3. Garlic and natural yogurt can also be tried.

- **Hen Pecking**

  1. Can be caused by boredom. Add items for distraction: a head of cabbage, greens, or hang a Peck a Block in the run.

  2. Overcrowding can cause pecking, keep flock at the recommended size for your house.

  3. If one hen seems to be being picked on and blood is being drawn, she must be removed as blood only encourages more pecking. Anti peck products can also be applied to the picked on hen to try to break the habit.

Predators and how they kill

Raccoons

Raccoons prey on chickens at night and sometimes during the day. They can reach through wire and will often pull the chickens head or legs off, through the wire. They also can tunnel under runs without wire flooring. Easy latches can be opened by raccoons.

Dogs

Most dogs are natural predators and will find chickens very hard to resist. Even family pets, unless trained, will be tempted by your chickens. Most dogs will eat the chicken, leaving only feathers. Dogs can be trained to let them alone or even guard them. Some dogs will only chase or 'play' with them but the trauma can keep the hen from laying eggs for months.

Skunks

Skunks tend to eat the eggs more than kill adult poultry but they have been known to do that occasionally also. Eggs will usually be crushed inwardly and chickens will have the head removed as the skunk wants to drink the blood.

Hawks

will kill adult chickens if they are outside without the protection of a cage with a wired roof. Prey is killed with talons and torn into bite size pieces with the beak.

Snakes

Venomous snakes can kill full sized hens but most snakes will go for the eggs. Keep the henhouse secure with no cracks or holes. Keep tall grass cut and do not have your henhouse close to compost piles or piles of logs or rocks, as these are snakes favorite hideouts.

Cats

Cats (even domestic pets) enjoy the thrill of the hunt and can prey on small chickens and chicks. They can be trained to see them as fellow pets however. Metal mesh, barbed wire picket fence and tall hedges with thick lower growth can deter them.

Opossum

Opossum will eat the chicken feed, eggs, chicks and will attack chickens. Keep a strong cage and your chickens penned at night.

Bobcat, Coyotes, Fox

All of these enjoy eating chicken. Secure your chickens at dusk in a tight and strong henhouse to deter them. Large breed dogs are good to dissuade the animals from the property or at least to alert you to their presence.

Other Predators

rats, mice, owl, crow, squirrel, Fisher cat, bear, mice, mink, weasel, lice & mites

Chicken Breeds to Consider for Your
henhouse

1. Rhode Island Red
Great layer of brown eggs. Good looking chicken. Good disposition.

2. Buff Orpington
Fat yellow chicken which lays brown eggs. Very docile.

3. Barred Rock
Interesting black and white striped pattern. Decent layer of brown eggs and good disposition.

4. Americauna
Fuzzy face, large chicken. Lays blue eggs! Good disposition, generally friendly.

5. White Leghorn
Prolific white egg layer. Nervous and flighty, not as docile.

All dimensions are nominal. Exterior sizes are measured at the floor before walls or siding; room sizes exclude walls and may not reflect usable space.

Keep chickens safe with a ramp

Tips for Problem Solving in the henhouse Common Problems

with backyard chickens, and how to fix them.

- **Feeding Incorrectly**

  1. Table scraps are not a good solution for chickens. They do not provide the necessary diet needed to promote good egg laying and long life.

  2. Only feeding on grass will usually also be problematic as necessary nutrition is not received from only grasses. Today's breed of chicken cannot survive on the same diet as chickens from 30 years ago.

  3. Make sure wild birds do not have access to your chickens water and feed containers.

  4. Chickens need twice as much water as they do feed. If you do not use an automatic waterer, change water daily and make sure there is always plenty available. Lack of sufficient water will take large tolls on the health of a chicken very quickly as they need water to digest food properly.

- **External Parasites (ticks, mites etc)**

  1. Most are successfully treated with products available from your local rural merchandiser and you should routinely treat the chickens every 2 or 3 months.

- **Red Mites**

  2. Chickens infested with red mites will stop or slow down laying eggs, hesitate to roost in normal area, and may become anemic.

  3. Take a white tissue and wipe along the underside of perches at night when birds are roosting. Look for tell tale blood smears.

  4. Check often as they multiply quickly and are hard to get rid of if caught after they become very evident.

  5. For best results treat several times in the course of several weeks to get total control over the situation with a combination of wet and dry solutions.

A chicken house with wiring allows for automatic waterers and lights.

ADD A FEEDROOM TO YOUR COOP

Adding a feedroom to your coop makes caring for your chickens so much easier! No more hauling feed and supplies - you can have them inside an attached room! Choose a solid wall or screened wall between feedroom and coop area.

No upcharge for a screened wall. We build solid plywood by default unless you request screening. Due to the large amounts of dust that can come through the screen into the feedroom, we recommend a solid wall.

Solid plywood wall with screened door

Screened wall with screened door

34′ · W · W · 7′x8′ Run Area · Roost · 7x4 Coop Area · 4 Nest Boxes · 4x7 Feed Room · 4 Nest Boxes · 7x6 Coop Area · Roost · 7′x14′ Run Area · W · W · 4′x14′ Porch · 7′ · 11′

If you have an outside access nesting box, it will run the length of the coop, including across the feedroom area. The space where the nesting boxes are in the coop continues through the feedroom, as shown in the picture above. This allows for extra storage space in the feedroom, and keeps the exterior design consistent.
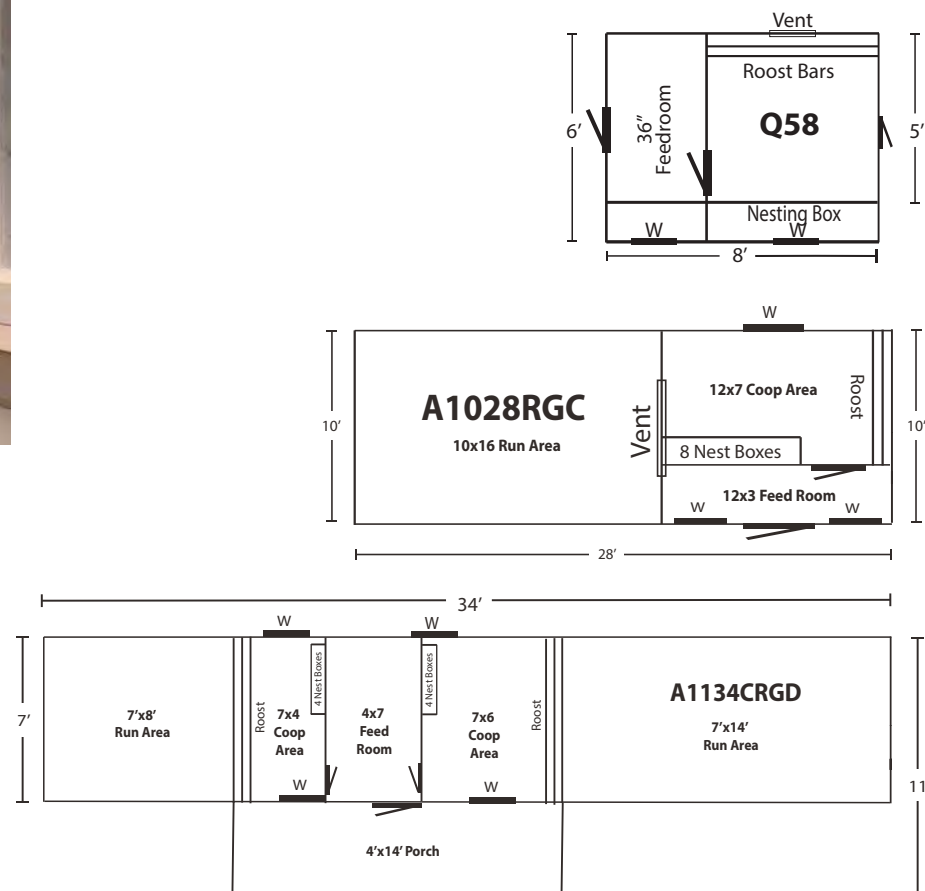

ADD AN AUTO FEED BIN

Make your coop chores as quick and easy as possible with an auto feed bin! This bin is built into the feedroom, with feed access on the coop side as shown below. This gives your chickens constant access to feed, and all you need to do it dump the large bags of feed into the bin.

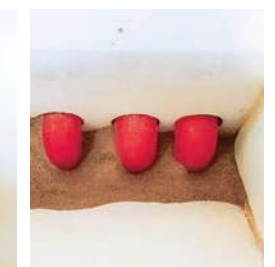

Auto Feed Bin shown in Feedroom

Auto Feed Access for chickens shown in coop.

Bin Interior

Adding a feed bin to set beside your chicken coop allows you to keep your feed and bedding close by and secure from rodents. Match your feed bin to your henhouse with matching stain or paint and trim. Custom sizes are available.

Feed Bins

- 2'W x 4'L x 42"H
- Holds 2 bags of feed and one bag of shavings

WATER RUN-OFF WATERING SYSTEM

This system allows collected rain water (roof run off water) to water your chickens! The collection tank outside the coop connects with the water nibbles and a small pump keeps water pressure to the nibbles at a consistent pressure to make easy and continuous water access easy for the chickens and almost completely hands off for you. Tank can also be filled with a hose if not enough water has been collected. Heater for water tank available. (optional)

INSULATION & INTERIORS

Adding insulation to your coop? The PVC Trusscore optional interior takes your coop to the next level! The PVC panels make it very easy to clean this ultra smooth water proof surface!

Plywood walls is the standard option if adding insulation to your coop.

ADD A HEATED CHICK COOP

The perfect set up for new chicks! No more bringing the chicks into the house. You can keep them safely in the coop.

Why Deep Litter? Deep litter allows bedding (usually wood shavings) to build up over time. Instead of cleaning the coop weekly, you just add fresh bedding on top. Many people only do a full clean-out once or twice a year. As the bedding layers build and start breaking down, beneficial microbes form. These help neutralize ammonia and reduce odors—keeping the coop smelling fresher. The deep litter method encourages beneficial bacteria that support a healthier respiratory environment. It also gives chickens something to scratch around in, preventing boredom. At the end of the season, the used bedding becomes rich, ready-to-finish compost for gardens. Chicken-keepers love the "free fertilizer." Less frequent cleaning and fewer bedding changes mean less work and lower cost over time
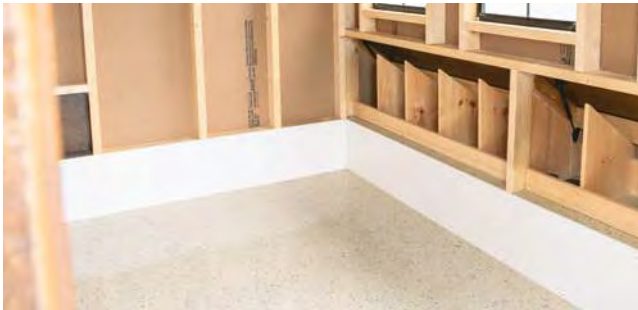

Our Deep Litter Option has 12 in. high non-porous Azek panels to prolong coop integrity and make clean out easy.

Options for Deep Litter Coop
with a FeedRoom

If you want a feedroom and the deep litter option on your coop, we recommend one of the following options to make scooping out litter easier.

This small double door right at floor level makes it easy to scoop/push the dirty litter right out the door.

Similar to the double door is the single door. At the perfect spot to make cleanup easy.

The option that we recommend, if you have room in the coop, is to add a man door in the coop area This allows you to enter and exit the coop directly to continue the work.

LITTER TRAY
Litter trays have handles on both sides so they can be removed from either the coop side or through the clean out lid. (clean out lid is optional but highly recommended) The litter trays catch all the droppings from roosting hens which is where it piles up the most in the coop, thereby making the biggest mess in the coop very easy to quickly empty. These can also be used to help clean out the coop - when scooping up the litter, shovel it onto the trays then simply pull them out from the outside to empty them.

CLEAN-OUT LID FOR LITTER TRAY SHOWN

STANDARD NESTING BOXES
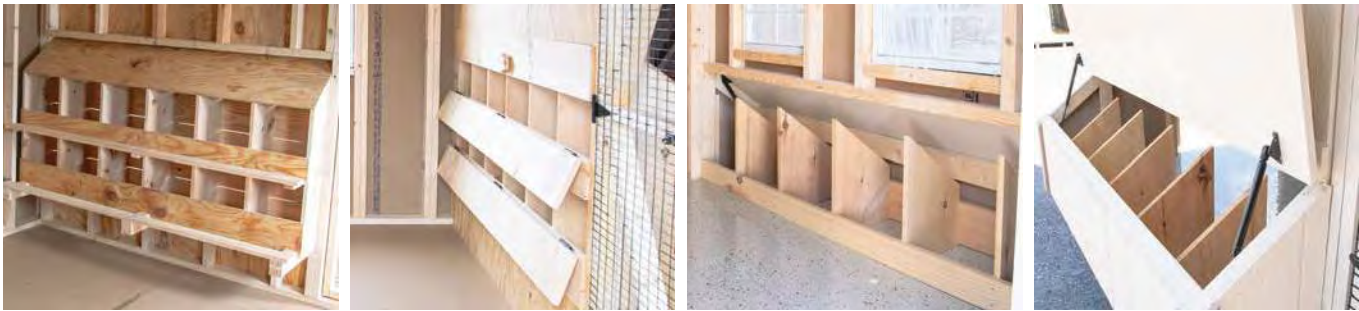

Standard Nesting boxes when gathering eggs from a feed room.

Standard Nesting boxes when gathering eggs from a feed room. (View from feed room)

Standard Nesting boxes when gathering eggs from outside the coop. (View from inside coop)

Standard Nesting boxes when gathering eggs from outside of the coop. (View from outside coop)

ROLL-AWAY NEST BOXES - OPTIONAL ADD-ON

Roll Away Nest Box System - Gather Eggs from Outside

Feed Room Roll Away Nest Box System

Insert this roll-away nest box and make it easier than ever to gather your eggs from the outside of the coop. No broody hens to deal with, and no broken or eaten eggs. (This is the standard Roll Away nest system if you want to gather your eggs from the outside of your coop.)

This Roll-Away Nest box has privacy flaps. Flaps can reduce stress in the coop, and helps prevent squabbles. (This is the standard Roll Away nest system if you want to gather the eggs from inside your feedroom.)

More Options

POLYCARBONATE PANELS

Polycarbonate panels provide excellent winter protection for your chicken run, blocking cold winds and harsh weather while still letting in plenty of natural light. They help keep your flock comfortable, safer, and more active all season long.

VINYL SIDING

Vinyl siding keeps your chicken coop low-maintenance, weatherproof, and easy to clean—while resisting rot, pests, and fading.
